twiindata
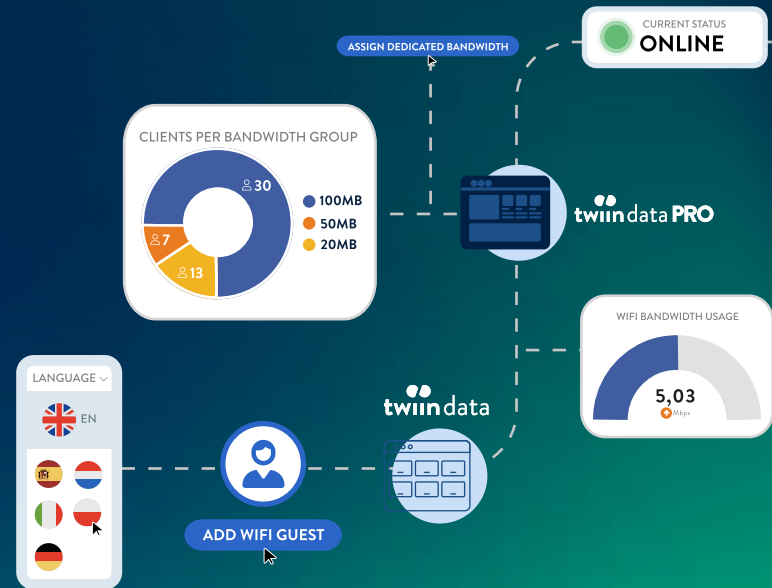

twiindata is an advanced network infrastructure controller including firewall, IP router, switch management, WiFi management and bandwidth control tool designed and supported in-house by technologywithin to give controllable levels of internet access (handling speeds of up to 10GB) to multiple clients in a building whilst securely segregating their data from one another.

twiindata has a centralised cloud-based user interface, designed to allow non-technical site managers to perform complex network configuration with ease and confidence.

ADD WIFI GUEST

Benefits

Security
Allows corporate clients to deploy their own IT security within the workspace in a very simple and easy to use manner.

Resilience
Can be increased by the addition of a second **twiin**data box in your comms room and a backup line if required.

Opex or capex payment options
A unique completely flexible pricing model – buy or rent, or a combination of the two – to suit your business.

Cloud or hardware solutions
Choose what suits you better. **twiin**data integrates with existing hardware and assets with our flexible approach.

Features

+ Hardware agnostic allowing compatibility with a range of switch and WiFi manufacturers.

+ Complete control of bandwidth contention levels, including dedicated bandwidth.

+ Secure WiFi for workspace customers allowing access to their own network and bandwidth building-wide.

+ Full switch port configuration and management.

PURE
OFFICES

"The great thing about working with technologywithin and their **twiin**data platform is that it enables our centres to have their clients connected in seconds. **twiin**data empowers our colleagues to manage their buildings effectively with the reassurance that they are backed up by the friendly support team at technologywithin."

A global solution

twiindata is the ideal flexible bandwidth management solution for multi-tenanted workspaces in all geographic markets. It's cloud-based solution can be deployed in any country with ease.

The **twiin**data interface, which allows front of house staff to complete the everyday bandwidth management tasks with ease, is also available in several languages, including Dutch, French, Spanish, German and Italian.

So, if you are expanding your portfolio into new markets and want one strategic solution to manage connectivity, this could be the answer.

Integration approach

Our open-minded approach to integration means clients aren't locked into a single software eco-system and instead can choose solutions that suit their chosen business model. That's why we've developed twiindata to integrate with the leading workspace management software products on the market. So, you can benefit from best of breed internet bandwidth and WiFi management whatever workspace software you use.
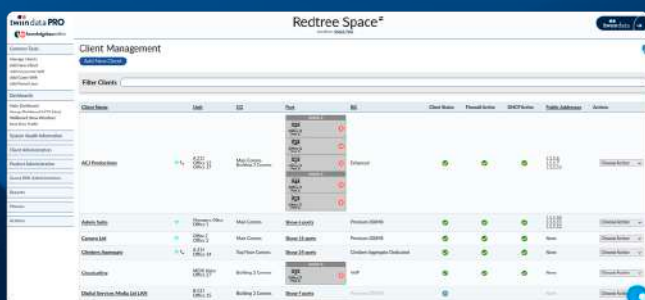

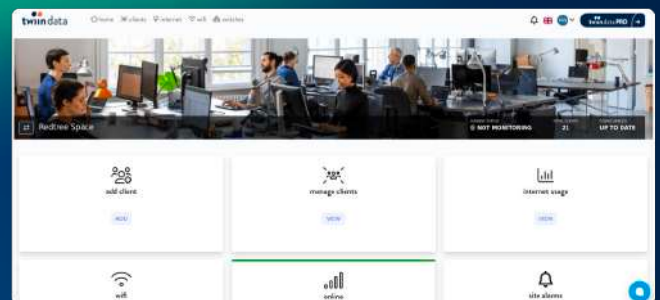

By sitting **twiin**data beneath your chosen software, your front of house teams will be able to manage internet connectivity and workspace management activities quickly and easily through a single interface and offer an improved member experience.

A choice of interface

twiindata - Great for front of house teams

✓ Manage guest WiFi set up and password management

✓ Set up new office clients with ease – assign and configure ports (including port grouping)

✓ Assign, upgrade and downgrade dedicated bandwidth instantly

✓ Multiple language options

twiindata PRO - Ideal for building and IT management teams

✓ Monitor internet connectivity and onsite equipment performance

✓ Review client internet usage and manage contention

✓ Manage port switch configurations and management

✓ Troubleshoot network issues proactively with advanced management tools

Easy to use technology that enhances flexible workspace

We partner with flex operators and commercial landlords to bring their spaces to life by providing connectivity and workspace management solutions that deliver growth. We work with a range of clients that includes everyone from boutique coworking spaces through to large multi-site operators.

Our ethos is to be easy to do business with. Our clients don't just choose us for our leading-edge technology. We deliver a service that's friendly, authentic and personal. We're their trusted technical advisers who listen, ask questions and communicate our knowledge clearly. We relish the challenge of meeting our customer's needs every day - of making them happy.
